

# T12 Daily Operational Checklist

Before cleaning with your machine there are a few pre-operational checks that need to be done to confirm your machine is ready to be used.

- ☐ Check the brakes and steering for proper operation.
- ☐ Check the operating lights.
- ☐ Check for wire, string, or twine wrapped around the scrubbing brushes.
- ☐ For machines equipped with cylindrical brushes, confirm that the debris tray is empty and clean.
- ☐ Check the right side squeegee for wear or damage.
- ☐ Check the left side squeegee for wear or damage.
- ☐ Check the rear squeegees for wear or damage.
- ☐ Check the recovery tank cover seals for wear or damage.
- ☐ Confirm the vacuum fan inlet filter is clean.
- ☐ For machines equipped with ec-H<sub>2</sub>O™:
  - Check that all conventional cleaning agents and restorers are drained and rinsed from the solution tank.
  - Confirm the solution tank is filled with **clear cool water only**.
- ☐ Check the service records to determine maintenance requirements.

List below any problems that occurred during operation.
