Re: *Respiratory Syncytial Virus (RSV)*

Respiratory Syncytial Virus is a common respiratory virus that usually causes mild, cold-like symptoms. It causes infections of the lungs and respiratory tract.

- Other symptoms are more likely to lead to pneumonia
- The virus is usually spread through direct contact with an infected person
- Protect yourself and others from getting sick. Wash your hands with soap and water. If soap and water is not available, use a hand sanitizer that has been licensed by a governing authority.
- Wash or sanitize hands:
  - After coughing or sneezing
  - When caring for others
  - Before, during and after you prepare food
  - Before eating
  - After using the washroom/toilet
  - After handling animals or animal waste
-
